TA Recruitment System Prototype

Group 40

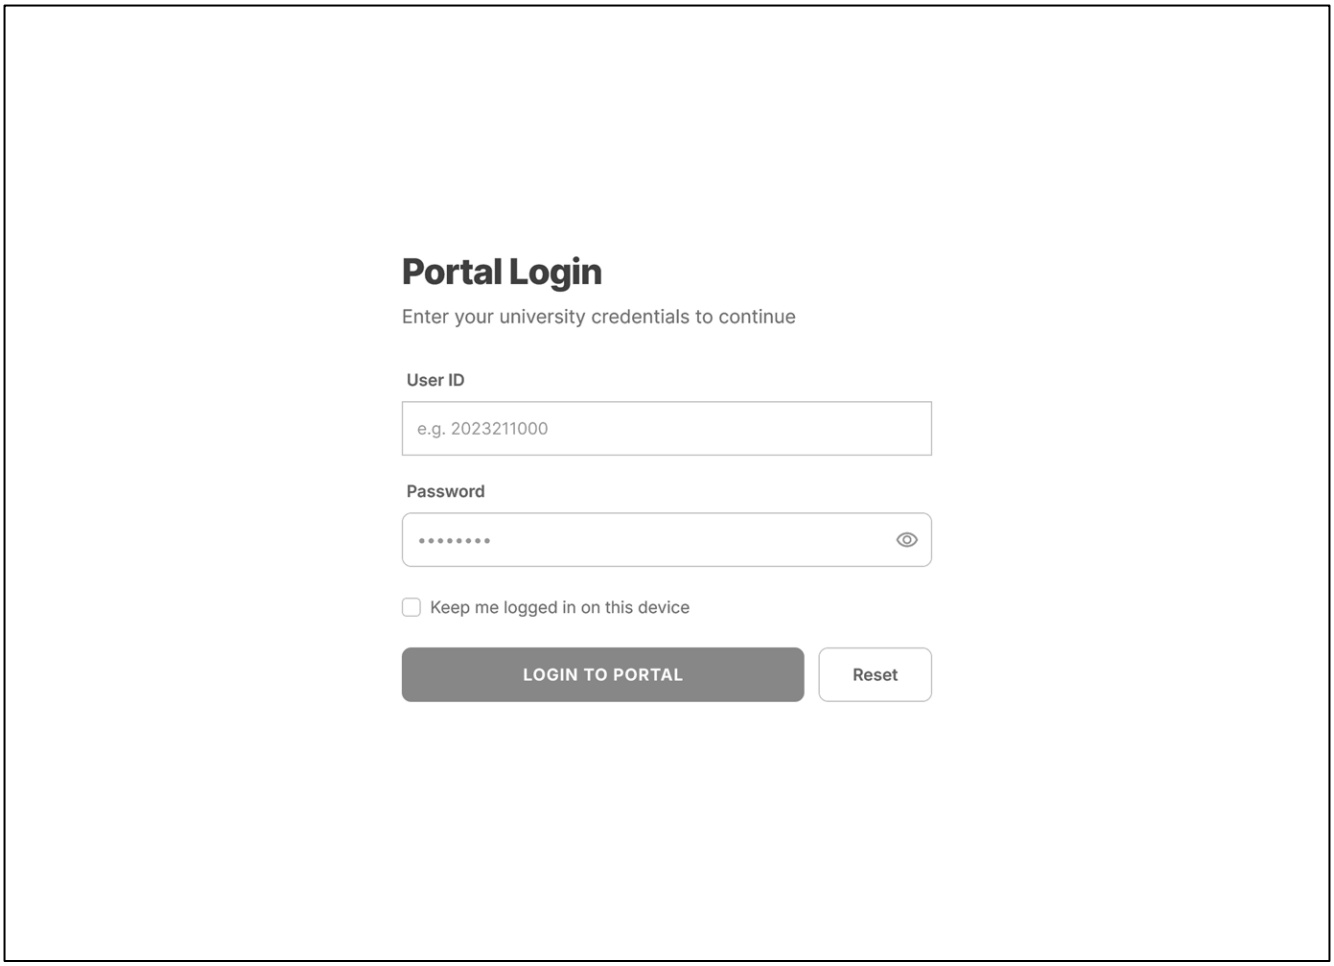
Medium fidelity prototype showing the core structure, user flows, and interaction logic of the system.

Login and Role-based Access

Users enter different parts of the recruitment platform based on their account role.

Enter credentials and access the corresponding portal based on the user role.

Successful login routes the user to the TA, MO, or Admin interface.



TA User Journey

Flow

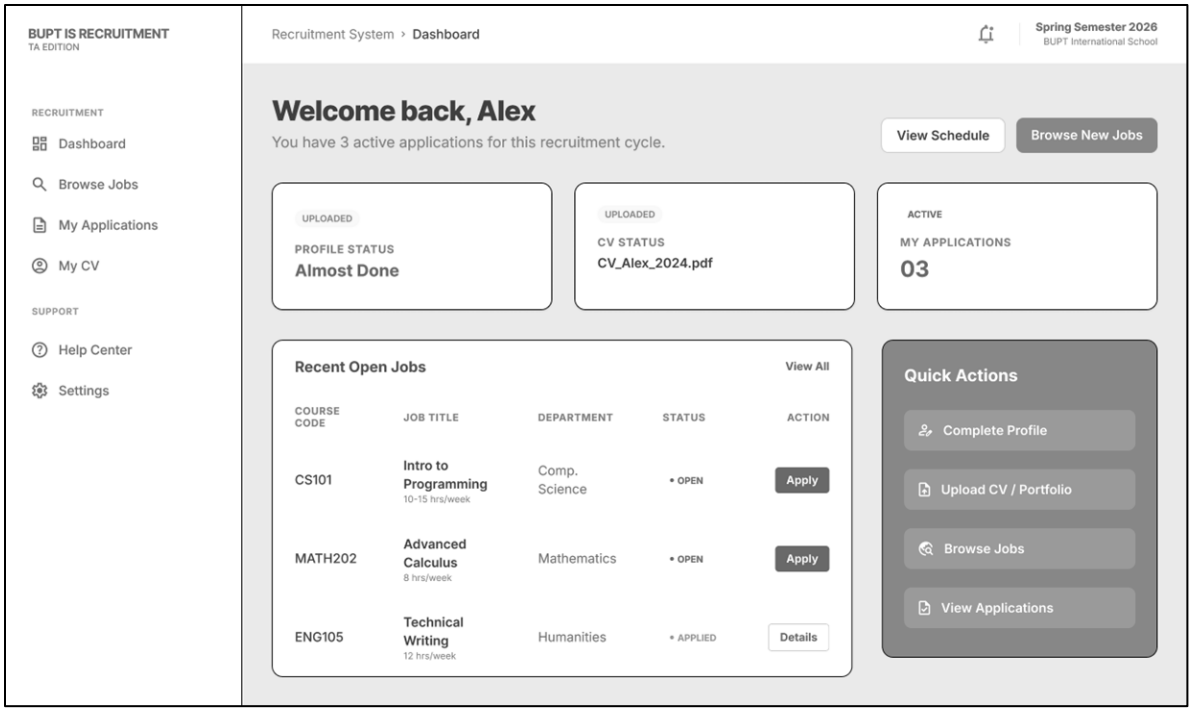
Login → Dashboard → Browse Jobs → View Job Details → Apply → My Applications → My CV / Edit Profile

TA Dashboard

Dashboard acts as the starting point for TA tasks.

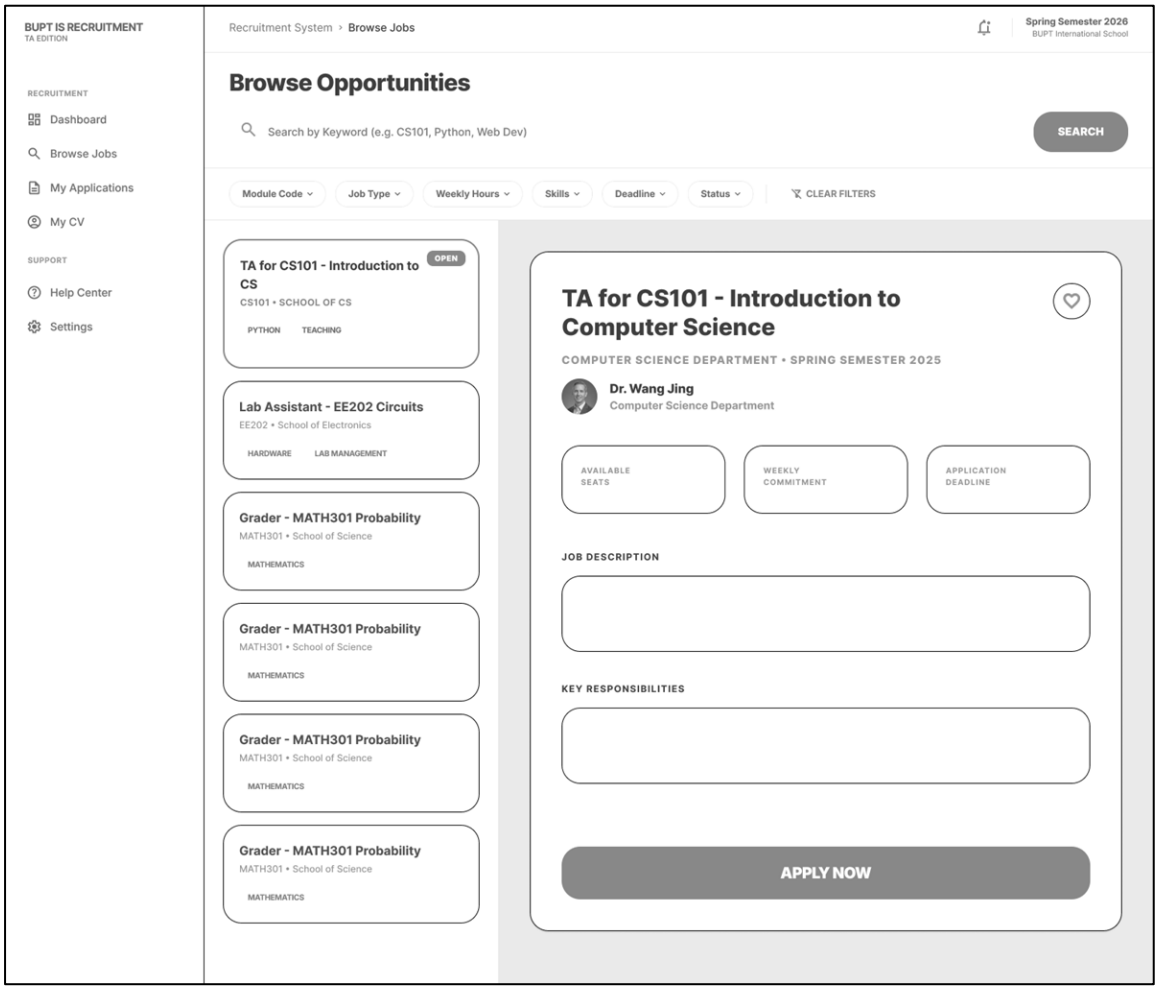
Navigate to job browsing, CV management, and application tracking.

Users can continue to profile edit, browse jobs or manage application materials.



Browse Jobs and Job Details

This section allows TAs to explore available roles and review detailed job information before applying. Search by keyword, filter positions, open a job, review requirements, and submit an application. Selecting a job opens the detail view, where the user can review the role and proceed to application.

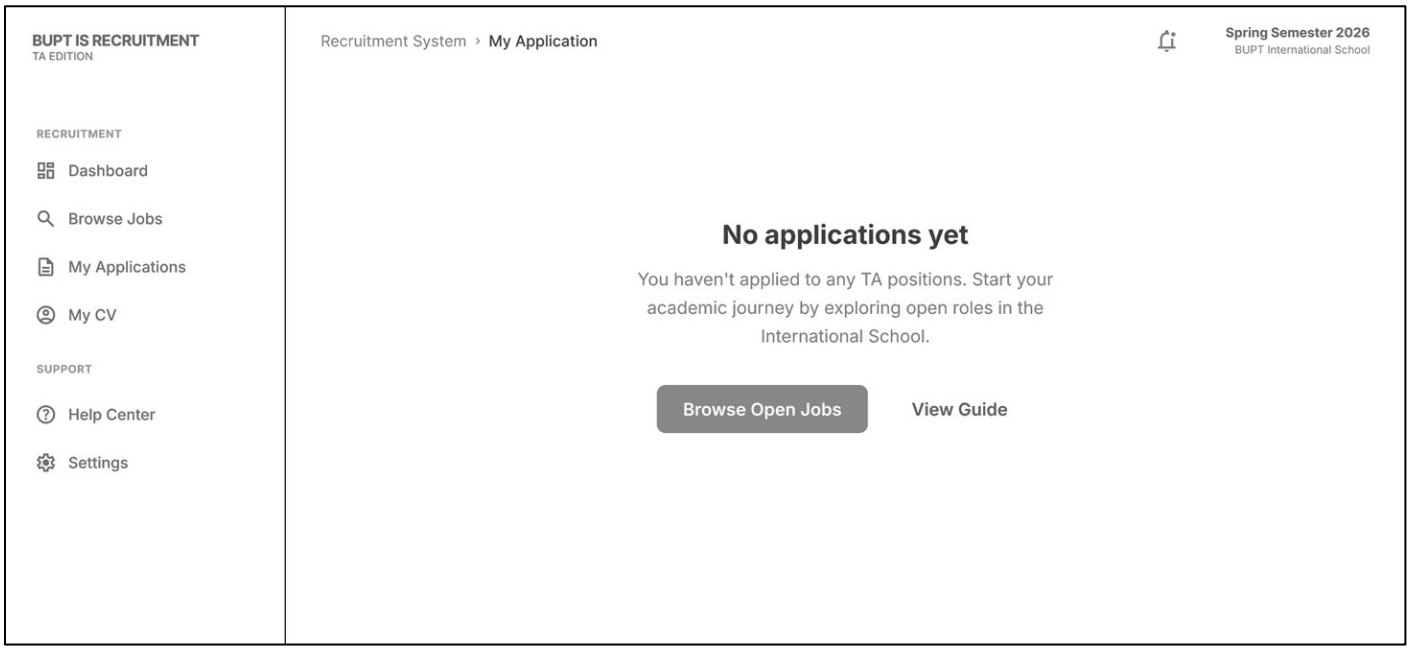


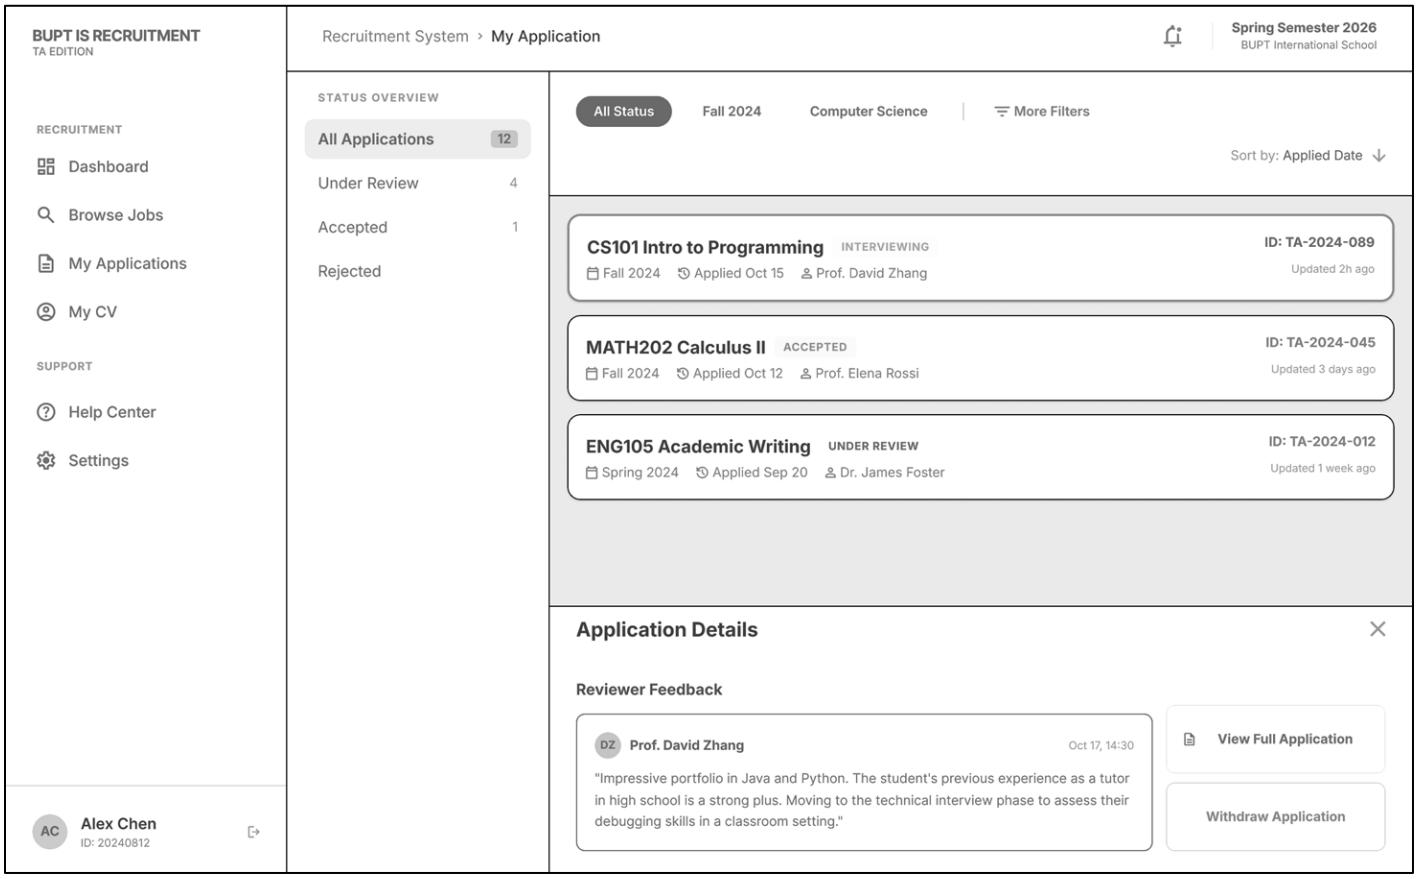
Application Tracking

TAs can monitor all submitted applications and review status updates, feedback, and next steps.

View all applications, filter by status, open application details, read reviewer feedback, and withdraw an application if needed.

Users can review current application outcomes and decide whether to continue waiting or update their profile for future applications.



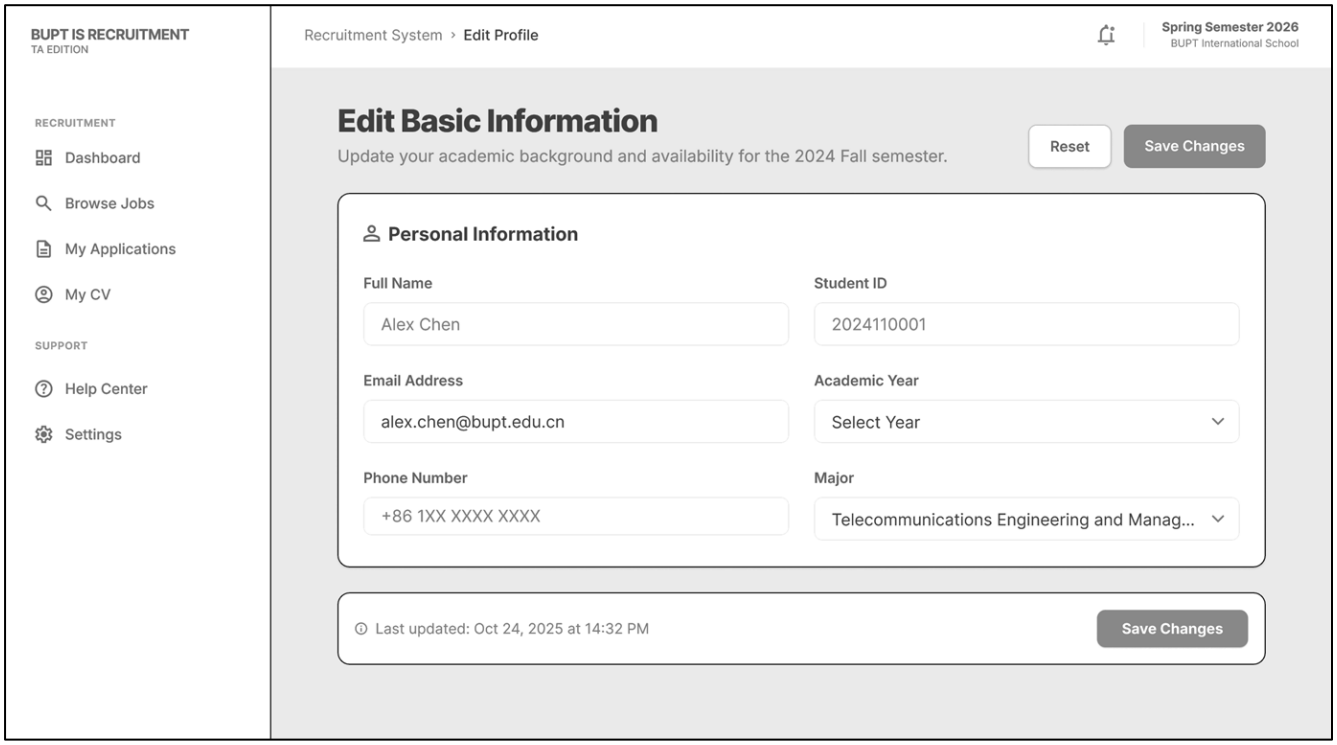


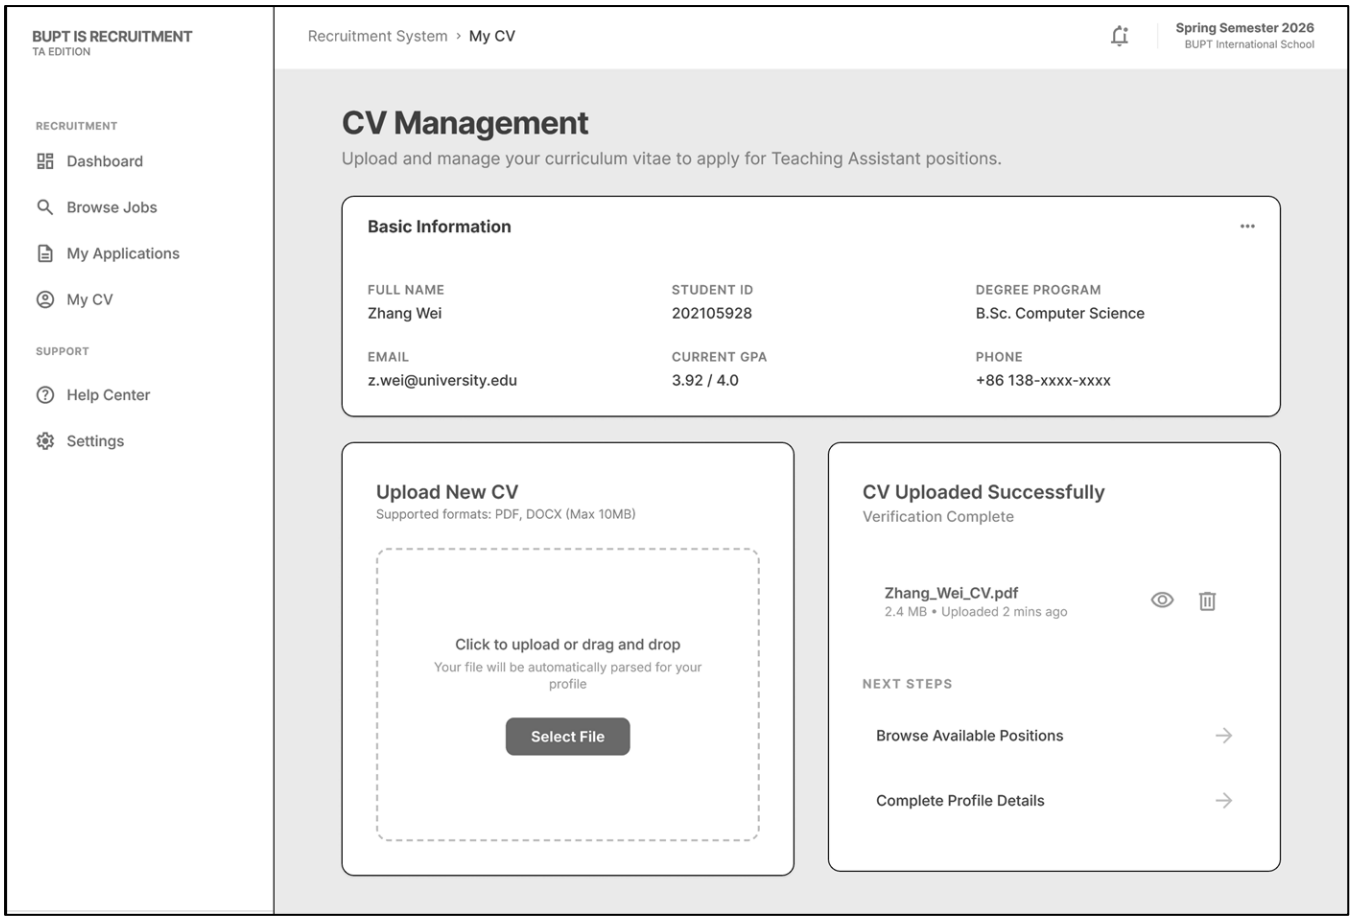
Profile and CV Management

Applicants can update personal information and upload supporting documents before applying for positions.

Edit personal details, update academic information, upload a CV, and maintain application readiness.

These pages support better job matching and enable TAs to submit more complete applications.





MO User Journey

Flow

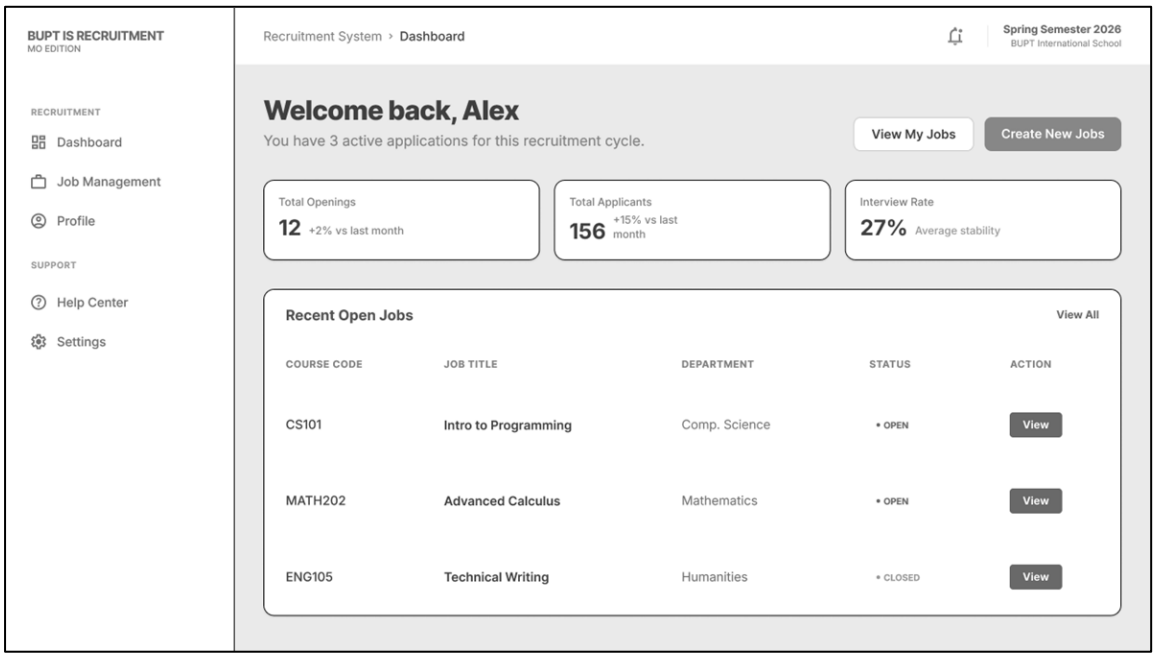
Login / Dashboard → Job Management → Edit Job Post → Applicant List → Applicant Details → Accept / Reject

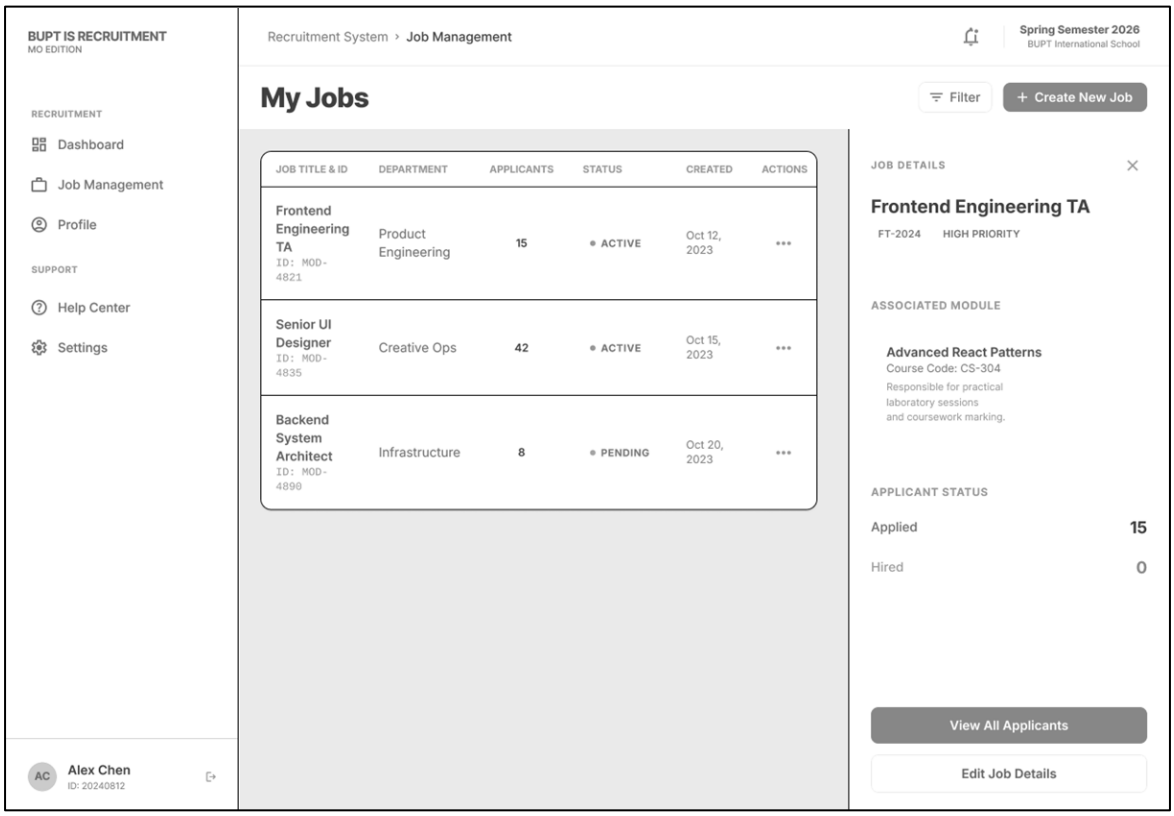
MO Dashboard and Job Management

The dashboard provides a role-based overview, while the job management page acts as the main working area for posted positions.

Review active jobs, inspect applicant counts, open job details, and navigate to editing or applicant review.

This stage leads to detailed job editing and applicant screening workflows.



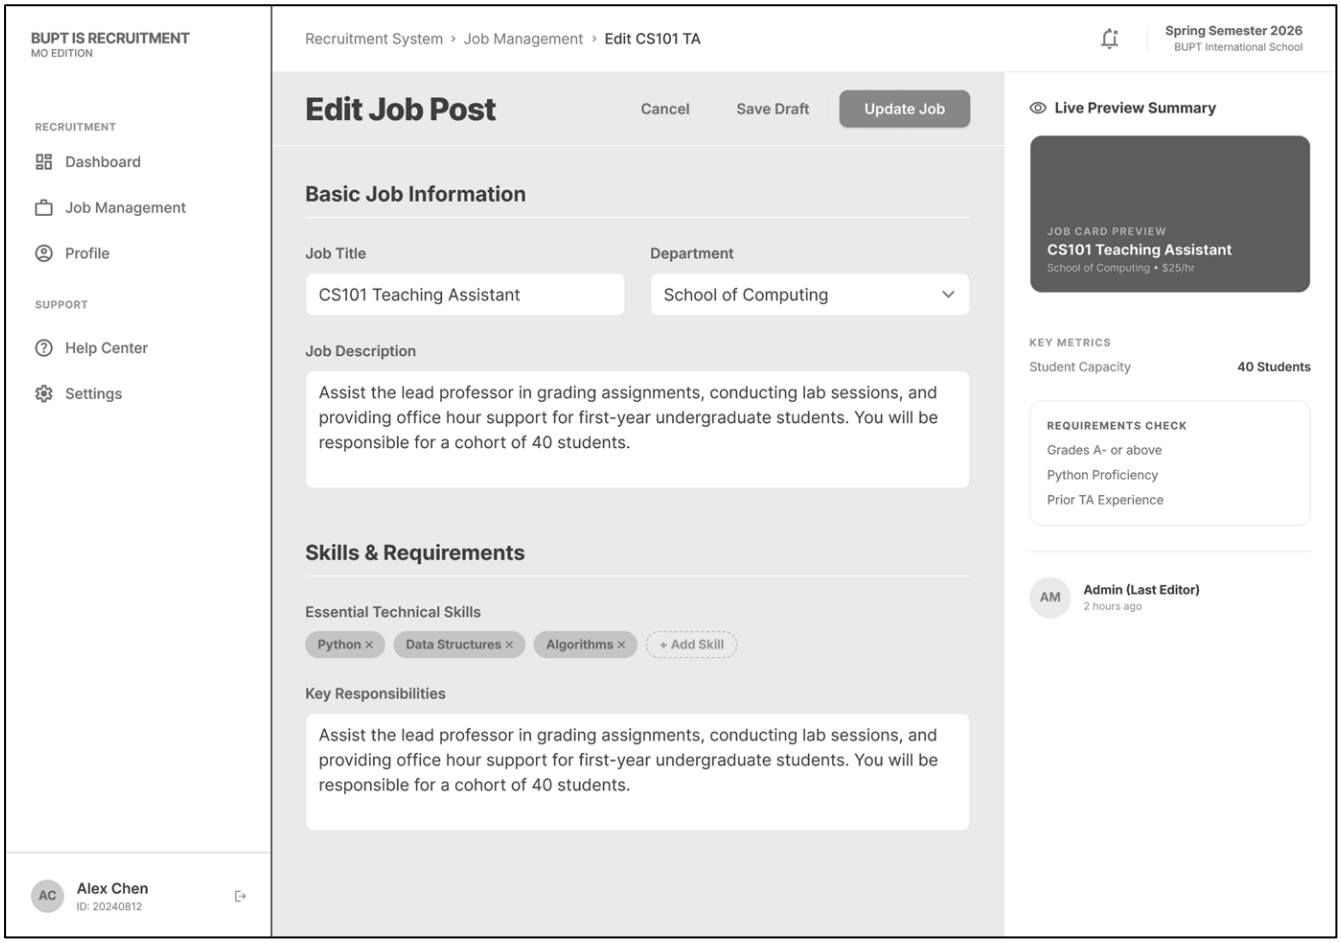


Create / Edit Job Posting

This screen supports the configuration of job information, requirements, and responsibilities before publishing or updating a post.

Edit title, department, job description, required skills, responsibilities, and save or update the posting.

Once saved, the post becomes available in the MO management area and visible to applicants if published.

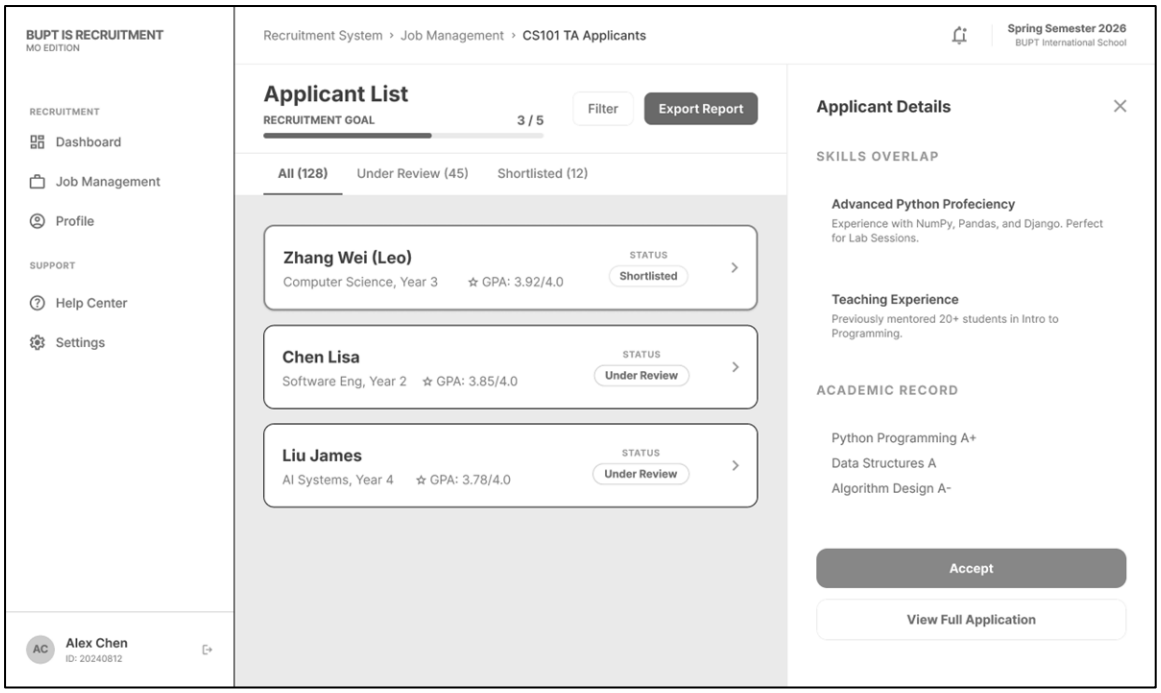


Applicant List and Screening

This screen supports the first review stage, where applicants are compared, filtered, and shortlisted.

Browse applicant cards, filter by stage, view side-panel summaries, and shortlist suitable candidates.

Selecting a candidate leads to a detailed review page for final assessment and decision-making.

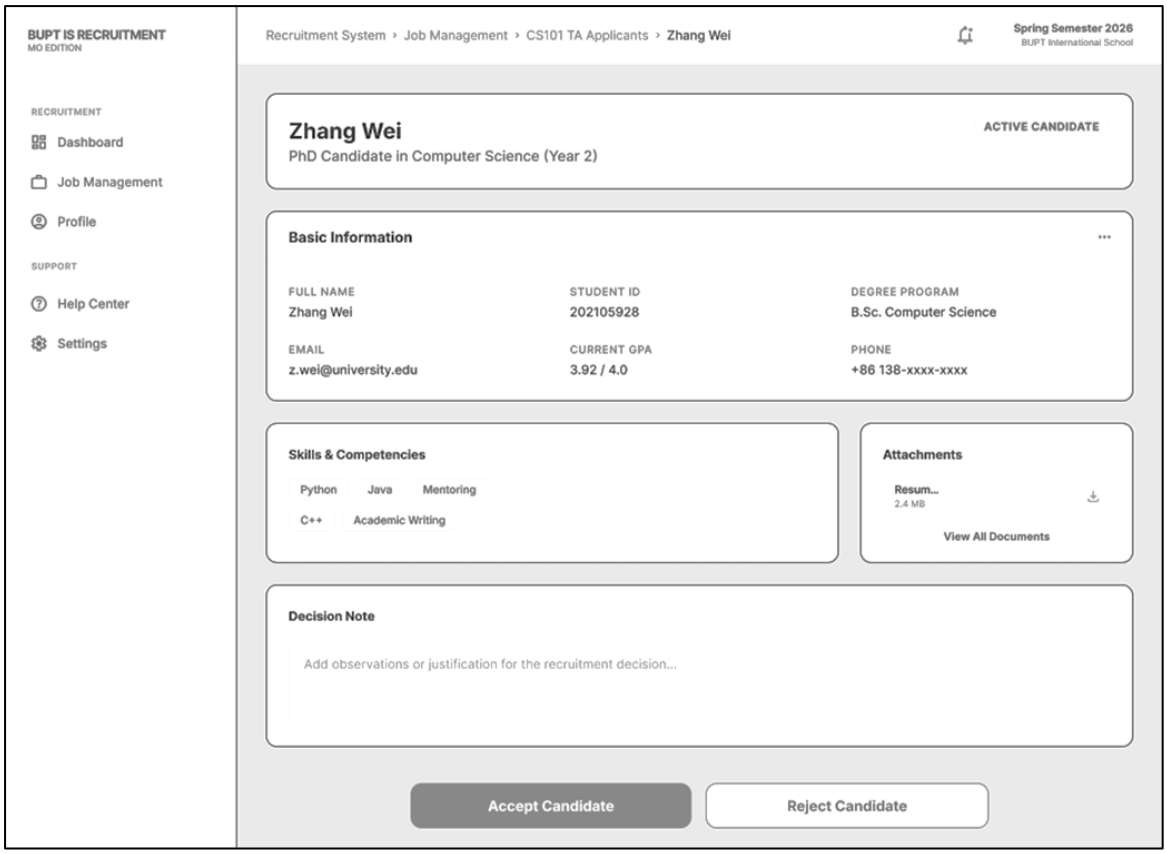


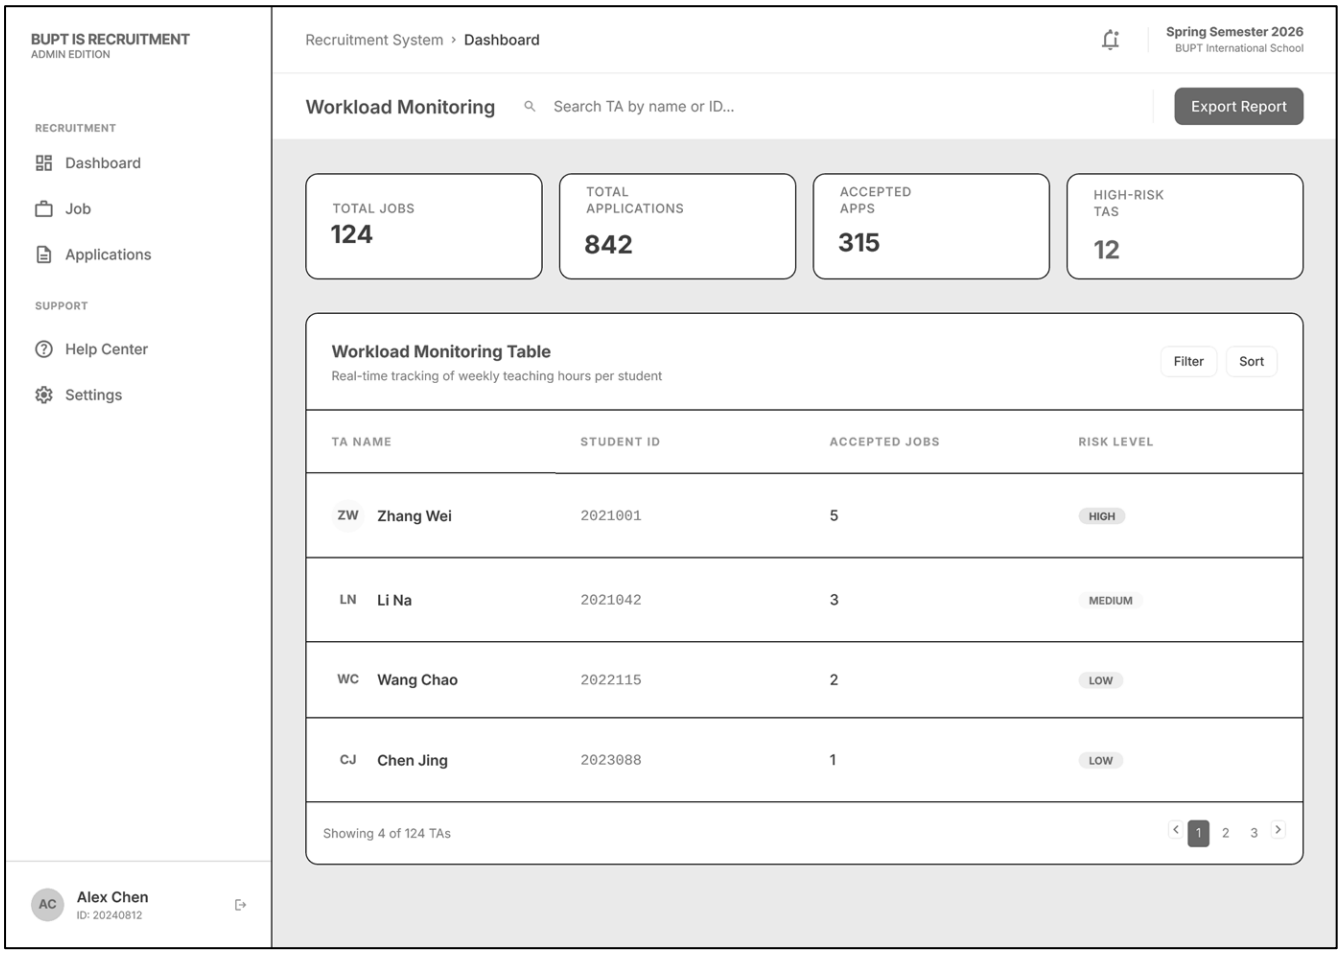
Applicant Details and Decision Making

This stage focuses on detailed evaluation, supporting evidence review, and final hiring decisions.

Review personal information, GPA, skills, uploaded attachments, and decision notes, then accept or reject the applicant.

The final decision updates the application status and completes the recruitment review process for that candidate.



Admin Workload Monitoring


The admin dashboard provides a system-wide view of TA allocation, workload balance, and risk levels.
Search TA records, inspect workload tables, identify high-risk cases, and export reports for administrative review.
This view supports operational oversight and helps ensure fair and manageable TA allocation across the system.
